

## Exercice 4P

1.

$$A = \cancel{0,000\,001\,45246}$$

$$A = 0,000\,001\,45$$

ou

$$A = 1,45 \cdot 10^{-6}$$

2.

$$A = \frac{C}{D}$$

$$\begin{array}{c|c} A & C \\ \hline 1 & D \end{array}$$

$$C = \frac{A \times D}{1} = A \times D$$

3.

$$A = \frac{C}{D}$$

$$\begin{array}{c|c} A & C \\ \hline 1 & D \end{array}$$

$$D = \frac{C \times 1}{A} = \frac{C}{A}$$

4.

$$F = G \times H$$

Écrire l'expression  
littérale de H

$$\begin{array}{c} F = G \times H \\ :G \quad \left( \begin{array}{c} \curvearrowright \\ \curvearrowright \end{array} \right) \quad :G \\ \frac{F}{G} = \frac{G \times H}{G} \end{array}$$

$$\frac{F}{G} = H$$
